

aliKa

the roller shutter with adjustable slats

Why choose ALIKA

Alika is an aluminium roller shutter shading system with adjustable slats, it can be raised and lowered and which retracts like a standard roller blind. In its lowest position Alika allows the gradual orientation of the slats to adjust the levels of light and air entering the room. It has a smooth and noiseless operating. With Alika is possible to live their own spaces with the maximum comfort, without sacrificing privacy. The using of Alika is simple and affordable for everyone, it can be operated with common electric motors available on the market (with the push-buttons or via their remote controls). Alika can be integrated into domotic systems, it contributes to energy saving and to the passive safety of the house.

The adjustable system

The adjustable system allows to gradually adjust all the slats from 0° to 90°, to pass from the darkness to the progressive adjustment of the light and air. The particular design of the slats favours, in case of rain, the flowing of the water toward the outside even in the position of maximum opening.

The functionality is in simple things

The functionality in the time of Alika is guaranteed by its simplicity, the orientation of the slats is automatic and natural because of its own weight force.

All the components have been carefully designed for the maximum strength and the best ergonomic in order to have an easy and fast cleaning.

Quality and technology

Not just any painting...

Thanks to the big experience of Kikau in the aluminium industrial surface coating, Alika receives an unique and absolute painting process. The Kikau technology integrates online the anodizing and the powder coating, according to the highest quality standards.

Anodizing + Painting = Warranty

As well known, the anodic oxidation of the aluminium is the only treatment that stops the filiform corrosion forming and guarantees the best resistance in time of the product to the most aggressive atmospheric agents, even in marine areas. The anodic oxidation is a non-toxic and ecological process used also in the food industry. Kikau uses only paints in pure polyester powder, non-toxic and environmentally friendly.

Standard Rough Colors

RAL 9010	RAL 1013	RAL 6005	RAL 6009	GREEN gothic
RAL 7004	RAL 9006	GREY gothic	RAL 8017	BROWN gothic

Rough Wooden Effects

WALNUT middle	WALNUT Puglia
CHESTNUT PVC-C	CHESTNUT PVC-S
GREEN venato	OAK antico

Plastic Components Colors

standard BLACK	opzional GREEN RAL 6009
opzional WHITE RAL 9010	opzional BROWN RAL 8017
opzional IVORY RAL 1013	opzional GREY RAL 7004

Other colors and finishes : availability, cost and delivery time to be evaluated on specific request. Swatches and indicative finishes. Check correspondence with bribe KIKAU colors.

Patent pending

Alika is the first roller shutter with adjustable slats from 0° to 90°, compatible with the standard guides and standard roller blind box.

Easy and simple

Alika allows an easy installation and it is easy to use, like a normal roller shutter.

Comfort e Privacy

The gradual adjustment system of the slats guarantees the maximum comfort and at the same time the maximum privacy.

Reliable and noiseless

Alika does not use any complex mechanism, the slats are oriented in an automatic and natural way because of their own weight force. The operation of Alika is smooth and noiseless.

Compatible with domotic

Alika can be integrated into domotic systems.

More security

Alika is made of reinforced aluminum profiles and stainless steel components that contribute to increase the passive safety of the house.

Energy saving

Alika helps to reduce the energy costs of the house.

Zero maintenance

Alika is maintenance free. The special component design allows a fast and easy cleaning; the cleaning is also safe thanks to the rounded forms and to the protection of the cuts and sharp edges.

100% environmentally friendly

We use only ecological raw materials. The exclusive Kikau process of oxidation and aluminium painting has zero environmental impact, it is without chrome and without toxic substances. Alika is 100% recyclable.

Care to design

Extra care and attention to the design of each component, to the choice of the finishes and colors.

CE mark

Alika is CE marked in compliance with UNI EN 13659.

Made in Italy

Alika is a product certified "Made in Italy"; this is a warranty of high quality, functionality and the protection of the users.

KIKAU

Quality is in the raw materials

The overall quality of a product is tested over the time, for this reason Alika uses the best raw materials and the most advanced technologies available on the market. Primary aluminium, stainless steel and special plastic materials are the main materials that Alika uses, so it is also 100% recyclable. Alika is a maintenance free and a "made in Italy" certified product.

Main technical characteristics of Alika

- Weight of the roller shutter curtain: 10.5 Kg/sqm (Excluding guides, pulleys, roller tube)
- Roller shutter curtain thickness: 15.5 mm (inside the guide)
- Slat spacing: 60 mm
- Maximum dimensions possible with single sheet: 200 cm in width | 280 cm in height
- Compliance with UNI EN 13659: Wind resistance Class 6 Mechanical strength Class 3
- Solar factor Gtot: Class 4 (With glass type C)
